📘 Project Report: Digital Literacy

Course: CSE0001 – Digital Literacy

Student Name: Yash Modi

Reg. No.: 25BAI11144

Branch: B.Tech – CSE (Artificial Intelligence & Machine Learning)

Date: March 27, 2026

---

1. Introduction

As a **Student Digital Ambassador**, my mission is to bridge the gap between technical academic knowledge and professional digital conduct. This portfolio documents my transition from a student to a professional with a secure, impactful online presence. By centralizing these deliverables in a GitHub repository, I demonstrate the version control and documentation skills essential for an AI/ML engineer in today's collaborative ecosystem.

---

2. Task 1: Digital Literacy Foundations

- **The Resource:** I designed an original infographic covering the **5 Pillars of Digital Literacy**: Data Privacy, Critical Thinking, Digital Tool Proficiency, Online Safety, and Digital Etiquette.
- **Technical Approach:** Utilizing professional design principles, I focused on high "signal-to-noise" ratio to ensure that complex topics like *Data Privacy* are accessible to a non-technical audience.
- **Reflection:** The challenge lay in "Data Storytelling"—distilling broad concepts into actionable visual cues. This skill is directly transferable to AI/ML, where complex model outputs must be communicated clearly to stakeholders.

---

3. Task 2: Building the AI/ML Professional Identity

- **The Platforms:** I established my professional footprint on **GitHub, LinkedIn, and Kaggle**.
- **Architecture:** * **GitHub:** Configured with a profile README to showcase my coding journey.
    - **Kaggle:** Specifically chosen to engage with global datasets, which is the cornerstone of my AI/ML specialization.
    - **LinkedIn:** Optimized to highlight my education at VIT Bhopal and connect with industry mentors.
- **Future Strategy:** These platforms are not static; they are the "Digital Ledger" of my career. I will use GitHub for project transparency and Kaggle to demonstrate my data-handling and model-building competency.

---

4. Task 3: Technical Collaboration & Logic

- **Execution:** I successfully cleared a Python introduction challenge on **HackerRank**. Python is the primary language for AI/ML, and this task verified my foundational logic and syntax accuracy.
- **Collaboration:** I engineered a **"Digital Literacy Awareness Quiz"** using Google Forms, integrated with Google Sheets for real-time data collection.
- **Academic Value:** This task demonstrated the "Data Pipeline" concept—gathering user input, storing it in a structured format, and preparing it for analysis—a fundamental workflow in any Machine Learning project.

---

5. Task 4: Professional Communication & Etiquette

- **Scenario Analysis:** I drafted two formal emails: an **Assignment Extension Request** and an **Internship Inquiry**. Both focused on clarity, brevity, and professional "Call-to-Actions."
- **Etiquette Guide:** I developed a "Social Media Do’s and Don'ts" guide specifically for engineering students to ensure their personal digital footprint doesn't conflict with professional opportunities.
- **Reflection:** I learned that professional etiquette acts as a "Social API"—it provides a standardized way to communicate effectively, ensuring that technical requests are prioritized and respected.

---

6. Task 5: Cybercrime Case Study – UPI Payment Fraud

- **Research Findings:** I performed an in-depth analysis of **UPI (Unified Payments Interface) Fraud**. My research highlighted how "Collect Request" scams and fake QR codes exploit a user's lack of technical vigilance rather than technical loopholes in the app.
- **Deliverable:** I created an **8-point Prevention Checklist**, emphasizing the "Verify-Before-Action" protocol.
- **Behavioral Change:** As an AI/ML student, I now view security through the lens of **Adversarial Attacks**. I have moved beyond simple password hygiene to implementing Two-Factor Authentication (2FA) and manual verification of all payment endpoints.

---

7. Conclusion

This project has solidified my understanding of "Digital Citizenship." Technical expertise in AI/ML is only valuable when supported by professional ethics, clear communication, and robust security habits. As a Digital Ambassador, I am now equipped to lead my peers in building a safer, more professional digital community at VIT Bhopal.
